

## **Breast Augmentation pre-surgery shopping list/information**

### SHOPPING LIST

- \*Stool softener (your pain medications may make you constipated if you do not take one)
- \*Panty liners (used for padding underneath bra over incisions)
- \*Low sodium foods (high sodium foods will increase your swelling making you more uncomfortable) such as unsalted crackers, graham crackers, reduced sodium soups, jell-o, bananas, rice, bread for toast, etc.
- \*If you don't have a recliner at home please be sure to have enough pillows to prop yourself up while sleeping. You will need to sleep elevated for approximately one week after surgery.
- \*After surgery you will wear a push down bandeau across the top of the breasts. This will show with any v neck tops. Please be sure that you have some crew neck shirts to cover this garment as it is extremely important to wear this. You will need to wear the bandeau and compression bra around the clock for 3 weeks. Dr. Paulson will determine if you need to continue wearing your bandeau after three weeks. You will need to continue wearing the compression bra weeks 4-6 during the day.

### INFORMATION

- \*Please be sure you have someone around to help you for the first few days after surgery. You will be tired from your medications and sore from surgery so you may not feel like or may not be able to perform some of the tasks you are used to performing
- \*You will have a lifting/pushing/pulling restriction of less than 5 pounds for weeks 1-3 of recovery and less than 30 pounds for weeks 4-6.
- \*It is very important that you wear the bra and push down garment that will be given to you on your surgery day around the clock for the first 3 weeks after surgery. The bra will help support your breasts and will push swelling out, and the push down garment will help hold the implants down so they heal in the appropriate position.
- \*You need to have a responsible driver/caretaker with you on the day of your surgery. You may not under any circumstances take a taxi/shuttle/bus home from the surgery center by yourself. This is for your own protection and safety. You also need someone to stay with you the night of your surgery to make sure you are okay and to help you remember to take your pain pills. If you arrive to the surgery center without a driver/caretaker, you will not be allowed to have surgery.
- \*If you are not from Bismarck or a close surrounding area you will need to stay overnight in town at a hotel. Dr. Paulson and/or one of his nurses will recheck you the next morning before you go home.
- \*You may not eat, drink, or smoke after midnight the night before your surgery. You also cannot chew gum, have any hard candy or anything in the mouth after midnight the night before. This is extremely important, and we will refuse to perform your surgery if you have not followed these instructions.
- \*After surgery you will have white tapes (steri strips) over your incisions and stitches. These need to stay on until your first recheck appointment with Dr. Paulson. If they start to come off, please do not pull on them or try to trim them as this may disrupt the stitches.

### **Breast Augmentation pre-surgery shopping list/information**

\*You will be allowed to shower 48 hours after surgery. When you do, please stand with your back against the water so the steri-strips mentioned above don't come off too soon. You may let the water/soap run over your incisions, but the incisions cannot be submerged in the bathtub for 3 weeks until the sutures are removed.

\*For 10 days prior to surgery you may not take aspirin, advil, ibuprofen, anything herbal, or any multivitamins as all of these can thin your blood causing you to bleed more than usual during surgery (if you have any questions about taking other medications not mentioned please contact Dr. Paulson's nurses at 701-255-3311)
